

A public charter high school  
that will empower  
innovators to change the  
world

## Our Beliefs

All students can learn at high levels.

All students benefit from learning in a diverse environment.

All students are powerful problem-solvers and are capable of making positive change now.

Education should be personalized for each student. Ipsos means “itself” and our school will focus on connecting our individual students with their passions.

## Opportunity Gaps in Marin County

While teachers and administrators are working hard within our system to support each learner, pervasive achievement gaps are the norm. On English, Math, and Science achievement tests, socioeconomically disadvantaged students are almost half as prepared as their peers. In a county with the resources such as ours, we must do better. We need to unlock the brilliance of every learner.

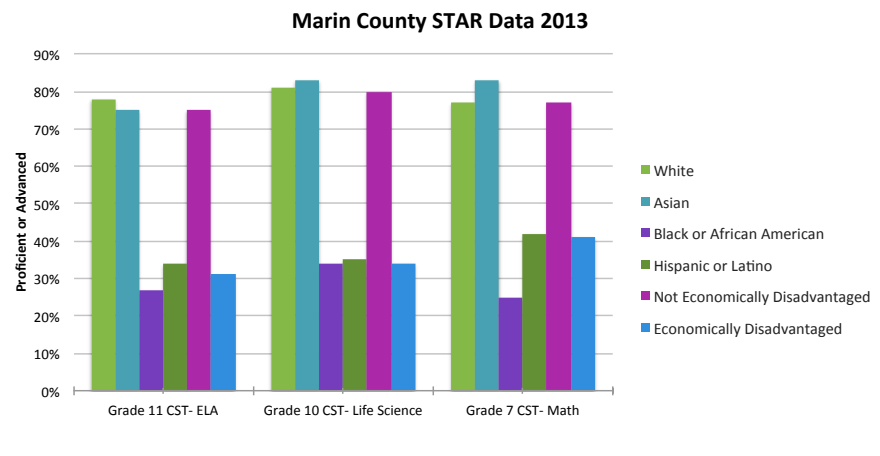

## Our Vision

We will blur the lines between school and the real world. Through our curriculum, internships, and partnerships with our community, we will tap into our students’ genius to find creative solutions to modern problems.

As students develop their knowledge, skills and networks, they will be empowered to take on greater challenges and will be prepared for success in a four-year university.

## Why Ipsos School?

Our innovative school model will allow us to engage and support all students. We have the power to close opportunity gaps in our county while challenging every learner.

CST: California Standardized Test

STAR: Standardized Testing and Reporting

## Flexible Time to Support and Engage Each Student

English, Social Science, Math, and Science teachers work as a team to educate their students for two years. They will develop interdisciplinary projects to engage students in meaningful work while they ensure that all students master essential knowledge and skills.

Teachers will use co-teaching, which will allow more flexibility and variability in the time that each student meets with each teacher. If students are already proficient in learning goals, teachers will help them move further and deeper in their learning. When students need support, our teachers will provide them the time and resources they need to accelerate their learning.

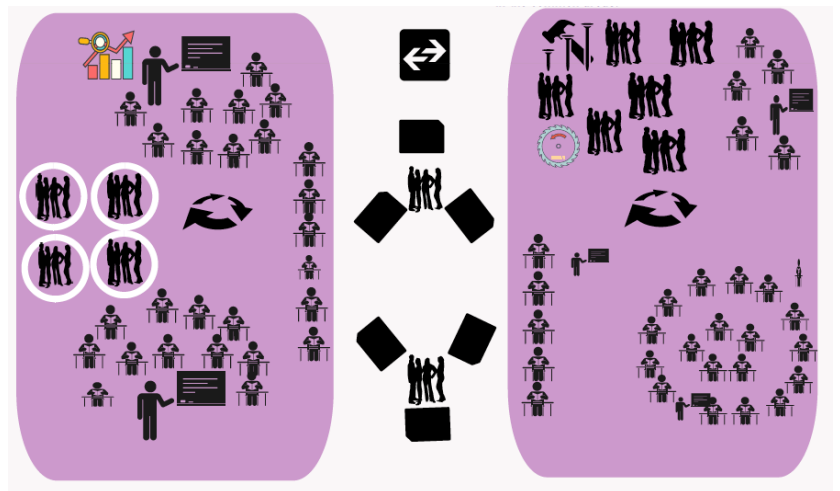

Our teachers will masterfully differentiate instruction for students based upon their needs and interests. Through project based learning, use of technology, and flexible use of time we will engage and support each learner.

## Planning to open in fall 2017

## Relationships That Empower

Students will each have a mentor that will support them in their short term and long term goals. Our community liaison will connect students with members of our community. In addition, students will have access to a maker space, artists, and community members to support their individual learning goals.

Every student comes to school with a unique set of skills, knowledge and passions that drive their learning. During our Innovation Lab, students will identify and address authentic problems in our community. We will teach students the process of design thinking as they develop solutions to create positive social change.
