

Bucket/Boom Truck

The district currently has a bucket truck, or boom truck which we utilize in both maintenance and grounds departments for the safe repair/ replacement of parking lot or building lighting, school signage, flagpoles, cleaning of gutters, tree trimming and other such services for which a traditional ladder would be unsuitable and unsafe.

Purchased well used several years ago, our current truck has fallen into disrepair and has become unsafe to operate. Additionally, the bucket is all metal, posing a clear safety hazard if working near electrical lines. We have identified this vehicle on our near-term replacement list and one has recently become available locally. It is a 2000 Ford F-450 and our district mechanic has verified that it is in very good condition. It has a full fiberglass bucket. As with the above mentioned work truck, these vehicles do not come around often, and are very hard to obtain three quotes, especially in the configuration that best suits our needs.

The cost of this vehicle is \$13,716.72.
