

# Updates to Middle School Math Program

San Mateo- Foster City School District March 25, 2021

# What do we want for our students in math?

Combat messages in society about math

“Reading with your child”

“Do math with your child”

Math: Just keep working.  
There is no rush. If you math  
with them, they will grow.

# What do we want out of our K-8 math program?

Math: Just keep working. There is no rush. If you math with them, they will grow.

## **Mathematics Team Mission and Vision**

SMFC students become enthusiastic and proficient learners of mathematics who are able to share their thinking, use multiple representations, and build on the ideas of others.

Increase meaningful mathematical discourse and sense-making to build fluency, flexibility, and strategic competence in all students.

# What challenges are we facing right now?

Covid learning loss is greatest in math.

5th to 6th Math transition is always problematic, especially after year of distance learning.

Math placement steps interrupted by pandemic.

# COVID Learning Loss

## COVID-Related Learning Loss Will Hit Younger Students Differently

By [Sarah D. Sparks](#) — August 26, 2020 2 min read

Educators are bracing for students to return to school this fall with significant learning loss, after more than six months of disruption from the coronavirus pandemic. New research suggests schools will need to target interventions differently for students in different grades and subjects.

Researchers with the assessment group Illuminate Education analyzed more than 500,000 computer-adaptive test scores in reading and math from kindergarten through 5th grade students in reading and math between fall and spring tests in the 2018-19 and 2019-20 school years. The data were used to project the difference in growth between the two years and the extent of learning loss in each grade and subject.

They found students in all grades and subjects had learning loss during the pandemic school closures this spring, but they followed different patterns. Kindergartners and 1st graders lost the most ground in general reading growth, but rising 5th graders lost the most fluency in reading aloud. Across every grade, students lost more learning in math than in reading, losing two and a half to four and a half months of learning, compared to a month or two in reading.

# Covid learning loss is projected to be greatest in Math

Projections from 500,000 computer-adaptive test scores in reading and math:

*“Across every grade, students lost more learning in math than in reading, losing two and a half to four and a half months of learning, compared to a month or two in reading.”*

Solve:  $-2x + 1 - (-3x + 3) = -4 + (-x - 2)$

$$-2x + 1 - (-3x + 3) = -4 + (-x - 2)$$

$$-2x + 1 + 3x - 3 = -4 - x - 2$$

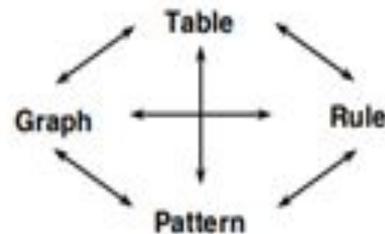

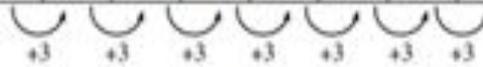

$$x - 2 = -x - 6$$

$$2x = -4$$

$$x = -2$$

Use the table below to determine the rule in  $y = mx + b$  form that describes the pattern.

input (x)	-2	-1	0	1	2	3	4	5	x
output (y)	-8	-5	-2	1	4	7	10	13	

$$y = 3x - 2$$

Will a heterogenous grade 6 help all students achieve at higher rates?

**Researchers from Columbia University found the probability of completing advanced math courses and math achievement increased in all groups when middle school students were enrolled in mixed-ability math courses.<sup>1</sup>**

Figure 1: Increase in % of students participating in de-tracked middle school math courses that took courses beyond Algebra 2 in high school

Average achievers	81% → 91%
High achievers	89% → 99%
Low socioeconomic status	32% → 67%
Black and Latino students	38% → 58%

From: Burris, Heubert, and Levin (2006)

**More high achieving middle school students in these mixed ability courses took the AP calculus exam and scored higher than students in tracked courses.**

This study of six middle school math classes in New York found that students' probability of completing advanced math courses beyond Algebra 2 in high school increased across all groups, including high achieving students. Also, the average scores on achievement tests

for high achieving students who learned in math courses without tracks, i.e. heterogeneously grouped, were not significantly different than high achieving students' scores in tracked math courses.

Will a heterogenous grade 6 help all students achieve at higher rates?

***Researchers from Stanford University and Kings College in London found all middle school students performed below their potential when in tracked math courses, both in high tracks and low tracks.<sup>2</sup>***

This study of over 1000 students in London schools examined students' perceptions of going from mixed ability to tracked math courses during middle school. The results suggest that all students were negatively affected by the tracked math courses whether they were in the low track or high tracks.

**Students in higher tracks in math were disadvantaged by fast paced lessons and pressure to succeed.**

### Quick Facts about Math & Tracking

**Q: Will taking away tracks in math (e.g. honors track math courses) help all students achieve at higher rates?**

**A: Studies demonstrate the positive impact of math coursework sequences that put all students through the same courses rather than tracking students based on their perceived ability.**

**Researchers from Columbia University found the probability of completing advanced math courses and math achievement increased in all groups when middle school students were enrolled in mixed-ability math courses.<sup>1</sup>**

# For Board Decision (at next meeting)

Offer all students a heterogeneous Math 6 course next school year to include engagement with teachers, site leaders, and families to understand how we strengthen our 6-8 math program for all students.

# Engagement started ...

- Ongoing meetings with Math Leads from each Middle School
- Site leader engagements
- Monthly meetings with SMUHSD Partner districts

# Key Next Steps

## Planning for a successful heterogeneous Grade 6 Math

- Curriculum Support
- Professional Learning for teachers focused on meeting the needs of a diverse range of math experiences
- Sustained coaching to support shifts in instruction
- Summer Bridge for rising 6th graders
- Family Engagements Fall 2021

# Thank You
