QUESTIONS

► COMPLEXITIES: 2010 TO 2020 CENSUS BLOCKS

The 2020 census blocks provided by the US Census Bureau do not exactly match the 2010 census blocks (there are fewer 2020 census blocks than 2010 census blocks) due to consolidation efforts.

If multiple 2010 census blocks were combined into one 2020 census block AND the 2020 census block is split by a trustee area boundary, the populations for each trustee area are estimated using the apportionment of population amongst the 2010 census blocks to determine total population distribution and overall population variance.

There was one major 2020 census block between trustee areas 1 & 2 that combined (6) 2010 census blocks into (1) 2020 census block and this block was split by a trustee areas boundary. The apportionment method was used to calculate an accurate population variance.

► COMPLEXITIES: SAN QUENTIN STATE PRISON (TA4)

Prior Demographer Analysis Performed in 2019 Using 2010 Census Data (Map 110).
 State Prison Census Block (TA4 = 4,854) was excluded from total population.
