Submitted by: Alan Minato  
Alan Minato, Controller-Treasurer

TO: BOARD OF TRUSTEES, SANTA CLARA COUNTY SCHOOL DISTRICTS  
BOARDS OF DIRECTORS, SANTA CLARA COUNTY SPECIAL PURPOSE DISTRICTS

FROM: EMILY HARRISON, DIRECTOR OF FINANCE 

SUBJECT: COUNTY OF SANTA CLARA TREASURY INVESTMENT PORTFOLIO STATUS

### RECOMMENDATION

Receive and file the June 30, 2017 Detailed Investment Portfolio Listing.

### DISCUSSION

In compliance with the State of California Government Code as amended by Chapters 783 and 784, Statutes of 1995 and in compliance with County Policy, the Santa Clara County Treasury Investment Portfolio Report as of June 30, 2017 is submitted for your review and acceptance.

The attached detailed investment reports list each investment of the County Treasury Pool as well as individual reports for specific investment funds that each school district or special district has in the County Treasury. The reports include the respective purchase and maturity dates, par value, amortized cost, market value, and yield to maturity for each investment.

A summary of market value versus cost is provided below for Commingled Investments of the County Pool.

	Cost	Market Value	Increase (Decrease)	Percent
Commingled Investments	\$6,730,196,172	\$6,714,607,595	(\$15,588,577)	(0.23%)

The yield of the pool on June 30, 2017 was 1.25%. As a comparison, on June 30, 2017 the yield of a 6-month Treasury Bill was 1.13%. A two-year Treasury Note was 1.38%. The State of California Local Agency Investment Fund (LAIF) yield was 0.98%.

Attached with the current investment strategy is a schedule that lists the average weighted maturities and yield for the Commingled Treasury Pool. Charts outlining investment concentration and distribution of bond maturities are provided for the Pool. Also included is a chart showing the one-year history of the Pool along with interest rates offered by selected comparable instruments.

Securities are purchased with the expectation that they will generally be held to maturity, hence unrealized gains or losses are not reflected in the yield calculations.

The market values of Pool securities were taken from pricing services provided by Bank of New York Mellon, Bloomberg Analytics, dealer quotes, and an independent pricing service.

A combination of securities maturing, new revenues, and tax receipts will adequately cover the anticipated cash flow needs for the next six months. Cash flows are continually monitored and are considered paramount in the selection of securities purchased for the Pool.

### Summary of Yields\* for Select Santa Clara County Investment Funds

Fund	2017			2016
	<u>Apr 30</u>	<u>May 31</u>	<u>Jun 30</u>	<u>Jun 30</u>
Commingled Investment Pool	0.99%	1.18%	1.25%	0.90%
Worker's Compensation	1.43%	1.40%	1.42%	1.20%
<b>Weighted Yield</b>	<b>1.13%</b>	<b>1.18%</b>	<b>1.25%</b>	<b>0.90%</b>

\*Yield to maturity (YTM) is the rate of return paid on a bond, note, or other fixed income security if the investor buys and holds it to its maturity date and if the coupon interest paid over the life of the bond is reinvested at the same rate as the coupon rate. The calculation for YTM is based on the coupon rate, length of time to maturity, and market price at time of purchase.

Yield is a snapshot measure of the yield of the portfolio on the day it was measured based on the current portfolio holdings on that day. This is not a measure of total return, and is not intended to be, since it does not factor in unrealized capital gains and losses and reinvestment rates are dependent upon interest rate changes

\*\*Cost Value is the amortized book value of the securities as of the date of this report.

## Santa Clara County Commingled Pool and Segregated Investments

### Portfolio Strategy

June 30, 2017

During the June 14, 2017 meeting of the Federal Reserve Bank (Fed), policy makers decided to increase interest rates for the third time in six months. The Fed had kept rates at near zero from the end of 2008 through most of 2015. Policy makers began lifting the bank's benchmark lending rate in equal increments of 25 basis points (a quarter of one percent) in December 2015. The Fed hiked rates again in December 2016 and most recently in March 2017. This specific rate applies to overnight loans charged among large banks. It is widely expected that the new rate will fluctuate in a range between 1 percent and 1.25 percent.

Policy makers have reiterated their resolve to further increase interest rates in 2017 continuing into 2018 and 2019 while acknowledging that inflation is occurring at a pace much slower than anticipated. The Fed has hiked rates with the express intent of constraining inflation growth, but lately, inflation growth has been decelerating. The personal consumption expenditures price index (PCE deflator), the inflation measure, favored by policy makers grew by only 1.4 percent over the past twelve months ending in June and has dropped for four consecutive months since February. The consumer price index (CPI), after excluding volatile categories such as food and energy prices, rose 1.7 percent over the past twelve months ending in June, a reduction compared to the 2.2 percent rise measured in March. Policy makers who gauge growth in excess of 2 percent as inflationary feel it is too early for concern over recent inflationary weakness. Policy makers cite non-recurring, one-time events as factors causing recent inflation trends and contend that an ever-tightening job market eventually will boost wages further and cause inflation to accelerate.

Although June's unemployment rate of 4.4 percent barely changed from the prior month, the overall trend in employment growth remains more than robust enough to keep the unemployment rate trending lower. Non-farm payrolls increased by 222.0 thousand jobs during the month. Many economists along with Federal Reserve policy makers comfortably conclude the labor market is at or near full employment. This means that most workers who are seeking a job can find one and businesses are left struggling to find qualified workers in an increasingly tighter market.

Historically, during this stage of the cycle, wage growth quickly accelerates. So far, this has not occurred. Average hourly earnings for private-sector workers over 12 months ending in June, 2017 rose only by 2.5 percent (63 cents), the same annual growth rate in late 2015. This was unchanged from May's reading, a month earlier. Economists suspect that the global labor market, a source for alternative cheaper labor may be constraining U.S. wages. A more persuasive explanation is that corporations are reluctant to raise pay, in part to protect their profit margins particularly, in the absence of rebounding revenues. Job openings are currently at an all-time high because some employers have delayed hiring to avoid paying elevated levels for the talent matching their requirements. It is also important to keep in mind the statistical impact of recent trends in job growth which has tilted toward lower wage fields including work at restaurants and retail stores. Although, minimum-wage increases in many states have boosted pay in those low paying sectors, employment growth in those fields reduces the average wage gains as measured across all jobs.

The portfolio strategy continues to focus on the:

- (1) acquisition of high quality issuers;
- (2) identifying and selecting bonds with attractive valuations;
- (3) appropriately sizing the liquidity portion of the portfolio to ensure adequate cash for near term obligations; and
- (4) ensuring that monies targeted for longer term investments are deployed in vehicles with favorable risk adjusted yields.

Broker-dealers have generally down-sized the amount of securities carried in inventories in response to risk-curbing rules crafted after the 2008 financial crisis. These risk curbing rules include the international regulatory framework for banks called Basel III and the U.S. 2010 Dodd-Frank Law. With more efficient software, the Treasury Division is addressing this issue by having increased its capability to review a larger volume of inventory listings to find attractive bonds. Portfolio structuring does not rely on interest rate anticipation strategies. These are strategies which primarily speculate on the direction of interest rates as a means to earn favorable returns.

## **Santa Clara County Commingled Pool and Segregated Investments**

### **Portfolio Compliance, Review, and Monitoring**

**June 30, 2017**

#### **Yield and Weighted Average Maturity**

The yield of the Commingled Pool is 1.25 and the weighted average life is 528 days.

#### **Compliance**

The County Treasurer believes the Commingled Pool contains sufficient cash flow from liquid and maturing securities, bank deposits and incoming cash to meet the next six months of expected expenditures.

#### **Review and Monitoring**

FTN Financial Main Street Advisors, the County's investment advisor, currently monitors the Treasury Department's investment activities.

#### **Additional Information**

Securities are purchased with the expectation that they will be held to maturity, so unrealized gains or losses are not reflected in the yield calculations.

The market values of securities were taken from pricing services provided by the Bank of New York Mellon, Bloomberg Analytics, dealer quotes, and an independent pricing service.
