

**Location: Best Elementary School**

***1. How is the afterschool program aligned with the school day?***

I meet with the first grade teaching team monthly to align math club activities to classroom learning goals.

***2. What differentiates the afterschool program from the school day?***

Interesting enrichment classes like Polymer Clay Sweet Shop and Paper Capers provide a recreational outlet as well as promote feelings of success for students who may struggle during the school day.

***3. If there is a LEARNS program at your site, how are the two programs blended?***

At Rosa Parks, the BEARS and LEARNS children are combined before and after school. This frees up the BEARS teacher to provide support instruction like kindergarten phonics push-in and math club leadership throughout the day.

***4. What are your goals for the year?***

1. Provide evidence based learning activities with first graders attending math club. Close collaboration with the first grade teaching team informs first grade math club planning.
